

tokenus investment AG

Germany | Technology | MCap EUR 12.3m

20 October 2021

UPDATE

Prospectus published;
Portfolio gains in value
BUY, PT up

What's it all about?

On October 18th, tokenus announced that the [securities prospectus](#) has been approved by German financial regulator BaFin and that the company would go ahead with a public offering and private placement of up to 20m shares at an issue price of EUR 2.55 per share. The prospectus mostly confirmed the AlsterResearch assumptions. There was a positive surprise in the portfolio of tokens: the number of Qredo tokens is actually closer to 12.2m than the assumed 12.0m. Combined with a sharp price increase in the token, we update our risk-adjusted NAV calculation and come to a new **price target of EUR 5.23 (old: EUR 4.34)**. The **issue price of EUR 2.55 thus looks attractive, offering more than 100% upside to our price target. We recommend to BUY.**

BUY (BUY)

Target price	EUR 5.23 (4.34)
Current price	EUR 2.50
Up/downside	109.2%

BaFin authorizes prospectus; Portfolio gains in value; PT up

BaFin authorizes prospectus. On October 18th, tokenus announced that the securities prospectus has been approved by German financial regulator BaFin and that the company would go ahead with a public offering and private placement of up to 20m shares at an issue price of EUR 2.55 per share. The proceeds will be used for the acquisition of investments, financial assets and tokens. The public offering will be conducted from 20 October 9:00am until 5 November 2021, 12:00 pm (CET).

New details in the prospectus. The prospectus mostly confirmed the AlsterResearch assumptions. tokenus plans 10 to 14 follow-up or new investments until the end of 2022, and at least one seems to be near closing. There was a positive surprise in the portfolio of tokens: the number of Qredo tokens is actually closer to 12.2m than the assumed 12.0m.

Qredo token drives value, PT up: The Qredo token has appreciated sharply in value and is currently quoted at USD 2.79 on coinmarketcap.com. To iron out the high short-term volatility, we use the 30-day moving average as the base for valuation and also apply a 20% discount to take into account the lockup period. Due to the price increase in the token, the 30-day average has now increased to USD 1.70 (formerly: USD 1.29), and the basis for NAV calculation after applying the discount is EUR 1.17. As a result, we **upgrade our price target from EUR 4.34 to EUR 5.23**.

Capital increase at attractive price. The **issue price of EUR 2.55 looks attractive, offering more than 100% upside to our price target of EUR 5.23**. The business model of tokenus only last week was validated by a portfolio company, Celsius, which was valued in excess of USD 3bn in a funding round, translating into capital appreciation of 20x (eAR) for tokenus. **We recommend to BUY the stock.**

A Short Primer on Blockchain and Tokens

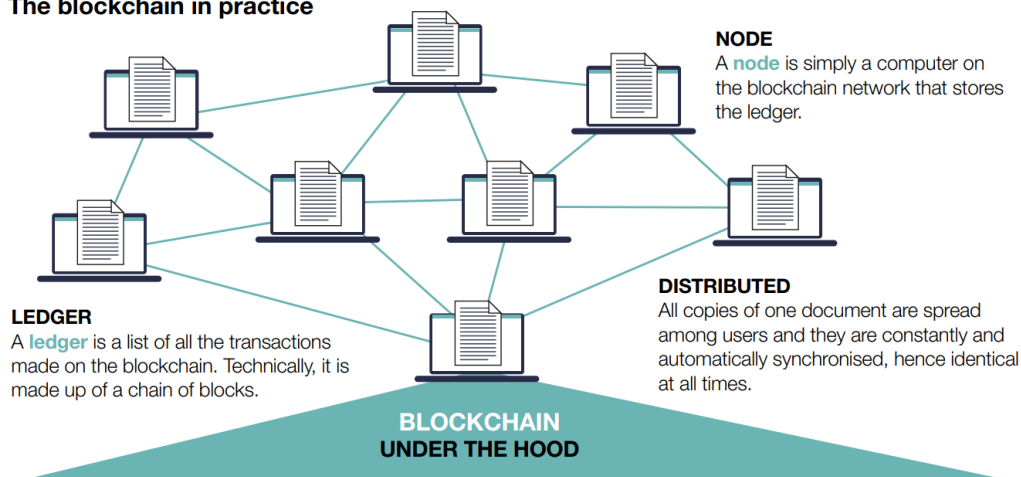

Blockchain

A wide range of documentation on the blockchain is available from different sources, ranging from non-technical explanations aimed at laypeople to highly technical documentation, including white papers and code on GitHub, requiring a high degree of sophistication in IT and coding. The following is a very short explanation not requiring any technical background, with the aim of showing the commercial potential of the blockchain. It is partly based on [The OECD Blockchain Primer](#), which provides a good non-technical introduction.

Very simply put, a **blockchain is a ledger** which chronologically records transactions. In this way, it can be compared to a shareholder register maintained by a stock corporation or a land registry maintained by a local authority.

However, while traditional ledgers like a shareholder or land registry have to be maintained by a single trusted central authority (a corporation, a bank, a government authority etc.), the **blockchain ledger is distributed among all users on the network (nodes)**, each keeping an identical copy of the ledger.

The blockchain in practice

Source: OECD

Transactions on the blockchain are **stored in blocks that are chained together** by a unique string of numbers and letters, a **hash**, created by solving difficult mathematical problems. Solving the problem and adding a block is called **mining** and usually rewarded, for example in cryptocurrency like Bitcoin. No block can be added without the consent of specified nodes in the network, the exact rules how this works is called the **consensus mechanism**.

Source: Savjee

Two key characteristics of the blockchain thus are:

1. **Distributed:** the database is held and maintained by all nodes in the network, there is no central authority.
2. **Immutable:** once a transaction is recorded on the blockchain, it is almost impossible to undo. This contributes to the trustworthiness of the recorded data.

Two further **features of a blockchain** are worth mentioning:

1. **Openness:** **public** blockchains are open for anyone to read, while **private** blockchains can only be viewed by a chosen group.
2. **Level of permissions required to add information:** In **permissionless** blockchains, anyone can contribute and add data to the ledger, in **permissioned blockchains**, only selected users can.

For example, Bitcoin and Ethereum are public permissionless blockchains. On public blockchains, the transactions of user accounts are visible to all other users, thus they are **NOT anonymous but pseudonymous**. This means that each transaction can be connected to a user account and if the identity behind that account becomes known, it can also be traced back to the user.

Tokens

Digital assets on the blockchain are called **tokens**, and the process of transferring the rights of a real-world asset into a digital representation is called **tokenization**.

Main types of tokens are

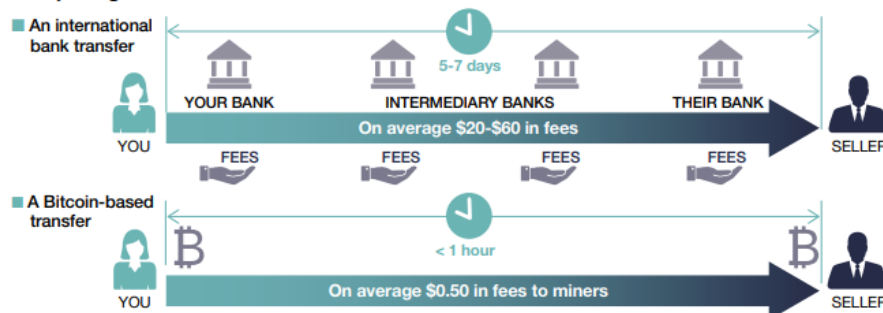

1. **Payment tokens**, also known as **cryptocurrencies**. Examples: Bitcoin, Ethereum, Cardano and Tether (note that Tether is a stablecoin, i.e. the value is pegged to the value of a national currency, in this case the USD).
2. **Utility tokens** represent a right to a good or service, similar to air miles or gift cards. For example, Filecoin allows users access to a cloud storage platform.
3. **Security tokens** provide **equity or an equity-like investment in a company**. For example, U.S. listed company Overstock paid a dividend in security tokens which come with nearly the same rights as the listed shares.
4. **Asset-backed tokens** represent a digital claim on a physical asset like gold, crude oil, real estate, pieces of art, wine or even intangible assets like a patent or a copyright.

Coins in a narrow sense are cryptocurrencies, but sometimes the expression is also used for other types of tokens. Start-ups can raise funds by selling utility tokens in an initial coin offering (**ICO**) or by selling security tokens in a security token offering (**STO**). The regulatory landscape for issuing tokens is still in its infancy and differs substantially between jurisdictions.

There are several **advantages of tokenization**:

- **Cutting out the middleman:** Tokenized assets or cryptocurrencies can be transferred directly from user to user without going through intermediaries like banks. **This saves time and costs and reduces counterparty risk.**

Comparing bank transfers and Bitcoin

Source: OECD

Fractionalization: Tokens can represent partial ownership of unique assets, for example the painting “Filette au béret” by Pablo Picasso has been tokenized into 4,000 tokens. These can be traded on a platform. Thus tokenization improves the liquidity of non-fungible assets (thus these tokens are called non-fungible tokens, or NFTs) and opens asset classes to investors that otherwise would have been shut out.

- **Automation:** Smart contracts on the blockchain are contracts that can be executed and enforced without human interaction. They can lead to efficiency gains: for example, a token representing a share in a rented house can distribute rents automatically by an airdrop, i.e. the transfer of cryptocurrency to the holders of the token. The same mechanism could be used to distribute dividends or interest.
- **Transparency and safety:** Whereas in a centralized ledger, there is a single point of failure that is vulnerable to manipulation, a distributed ledger is almost immutable and tamper-proof. It can also be designed to be more transparent if it is on a public blockchain.

Source: builtin.com

Next to cryptocurrencies and tokens, the blockchain is a potentially useful **enabling technology** in many other industries. Worth mentioning are:

Logistics / supply chains: Blockchain technology allows the tracking of goods along the supply chain, for example to ensure the origin of gemstones (e.g. diamonds), meat and other food or clothing. A more transparent supply chain will allow companies to identify risks and consumers to make informed decisions. The challenge is to ensure that only reliable information is entered on the blockchain (“garbage in, garbage out”).

Healthcare: Healthcare providers can use the blockchain to replace siloed information in multiple databases, making it easier to selectively share information. This can potentially reduce the costs and improve the quality of the healthcare system. Obstacles to implementation are privacy and data security concerns.

Energy: The blockchain can be used to set up peer-to-peer electricity trading, thus facilitating systems with a large number of distributed renewable energy resources.

Public administration: Blockchain technology can be used to register votes and conduct elections or referendums. Any administrative processes can be transparently documented with blockchain and thus used to secure against data loss and subsequent manipulation or to fight corruption.

Identity management: Blockchain identity management enables everyone in the network to see which credentials are valid and who attested to the validity, without revealing the actual data. The information is auditable, traceable and verifiable.

Other use cases of the blockchain are possible (for example in **law** and **digital content protection**) and are currently explored.

Company background

Products & services

tokenus investment AG is a stock market listed company that operates like a private equity or venture capital fund: tokenus raises capital from shareholders and then invests those funds into private blockchain companies and tokens. So far, the company has invested roughly EUR 2m in 9 target companies.

The investment approach of tokenus is **highly focused in four dimensions**:

- 1) tokenus only invests into companies that are closely related to the **blockchain**, for example because they use blockchain to build applications that users interact with or because they provide a service to a blockchain-related market. tokenus will typically invest in smallish (up to 5%) **equity stakes or convertible bonds** of these companies, but also in **tokens** issued by portfolio companies.
- 2) tokenus so far predominantly invests into **early-stage companies**, i.e. Pre-Seed (“friends and family”) and Seed funding rounds. However, the company has also started to move into later stages with a first Series A funding completed and is targeting even later stages with growing equity commitments. This also implies that single investments could grow from currently below EUR 0.5m into a range up to EUR 1.5m.
- 3) tokenus joins funding rounds as a **co-investor of large and well-known lead investors** (e.g. Coinbase Ventures). While tokenus performs its own due diligence, the company also benefits from the expertise of the lead investor in target selection and valuation.
- 4) tokenus has actively decided not to invest in cryptocurrencies, but only in **selected verticals**. Current portfolio companies mostly relate to **decentralized finance** (DeFi), for example blockchain-based lending, payment, liquidity management and insurance. Other verticals include **asset tokenization**, for example for real estate. Future verticals could include logistics, healthcare, energy markets and others.

The long-term value add of tokenus is built on the premise that the investment process will select companies that appreciate in value and can be divested at a capital gain. Due to the infancy of the blockchain technology and the early stage of target companies, tokenus **has not yet exited any investments**. Thus it is too early to evaluate a track record – and will stay so for a while considering that a typical venture capital investment has a lifespan of 5 to 10 years.

However, as for all VC investments, there is a high likelihood that **some portfolio companies will fail**, while the **payoff for the winners could be substantial**, even in “unicorn” territory, i.e. a private company valued at more than USD 1bn (tokenus already has one Unicorn in its portfolio, Celsius). To manage these risks, it seems instrumental to build a portfolio that is well diversified, both in number of investments and qualitatively in business models and verticals. At 9 companies operating in diverse markets, tokenus is on a good way to build such a portfolio, and there seem to be a number of leads that could lead to additional transactions soon.

Since August 3rd, 2021, the shares of tokenus are listed in Munich in the m:access segment, which is a market segment tailored to the resources and requirements of German SMEs, and in Berlin. tokenus has recently **listed shares also on the Frankfurt exchange and on Xetra**, which will lead to **increased transparency** through extended reporting requirements. The announced **large capital increase of up to 20m shares at a price of EUR 2.55** should also **boost the market cap and liquidity**, thus making the shares more accessible for institutional investors.

Shareholders

tokenus currently has circa 100 shareholders, mostly high net worth individuals and family offices. There are no mandatory voting rights notifications in the Open Market (tokenus' market segment), so there is no publicly available information on any large shareholders. We believe that there is no shareholder holding in excess of 10% of the share capital, and that this is the result of an active policy whereby tokenus set an upper limit to investments in earlier financing rounds.

Portfolio companies

The following table displays all portfolio companies of tokenus, together with the date and funding round in which tokenus entered the capital. It also shows the equity stake, or the value of the convertible loan or SAFE, whatever applies. The current valuation of the portfolio investments is estimated in the Valuation chapter.

Portfolio Companies of tokenus			
company	location	equity	
		stake	loan / SAFE
Celsius	London	0,24%	-
Trality	Vienna	4,07%	-
Estaking	Berlin	1,20%	-
iVE.ONE	Frankfurt	0,00%	EUR 250k
Nayms	London	3,46%	-

Qredo	London	1,73%	-
Adhara	London	1,15%	-
spacemesh	New York	0,20%	-

Sources: Crunchbase, tokenus, AlsterResearch estimates

Company Description: Celsius Network (founded in 2017) is a blockchain-based lending platform that is accessible through a free mobile app. Lenders can get high rewards lending their coins while borrowers pay low interest rates for credits. Celsius is the crown jewel in tokenus' portfolio: it has grown rapidly and currently has more than 1m users and in excess of USD 24bn in community assets. Despite some regulatory issues lately, Celsius in October 2021 was valued in excess of USD 3bn in the latest funding round.

Management: Alex Mashinsky (CEO, Co-Founder, inventor of VoIP, experienced in founding and scaling companies, with exits worth more than USD 3bn), Daniel Leon (COO, Co-Founder), Nuke Goldstein (CTO, Co-Founder), Jeremie Beaudry (CCO)

Employees: 352

Co-Investors: gumi Cryptos, Alpha Sigma Capital, Tether

Company Background: Trality is an algorithmic trading platform enabling users to build or code own trading bots and offer these bots on a marketplace. The bots can be connected to the APIs of the major crypto exchanges (Binance, Kraken, Coinbase etc.) to trade crypto currencies such as Bitcoin, Ethereum and many more. Founded in 2019, Trality aspires to empower retail traders by giving them the tools needed to compete with algorithmic trading programs employed by banks and other financial institutions.

Management: Moritz Putzhammer (CEO, Co-Founder), Christopher Helf (CTO, Co-Founder)

Employees: 16

Co-Investors: Cherry Ventures (lead investor), CMT Digital Ventures, Maximilian Tayenthal, Blockrocket.

ESTATING

Company Description: Estating is a real estate tokenization platform. Properties are fractionalised into tokens which can be bought by investors as an investment into real estate without requiring full ownership of the property. The process is set up within the regulated banking system, providing safety and convenience for investors and real estate sellers.

Management: Matthias Oetken (CEO, Co-Founder, formerly CFO/CRO of N26), Martin Halblaub (Chairman, Co-Founder, formerly CEO of SDX, an exchange for digital assets in Switzerland), Daniel Vegue Dominguez (CCO, Co-Founder), Vahe Andonians (CTO, Co-Founder)

Employees: 24

Co-Investors: Gauss ventures

iVE.ONE

Company Description: iVE.ONE (a product from Agora Innovation GmbH founded in 2017) is a White Label Digital Asset Infrastructure that enables banks, asset managers, investment companies, and corporates to tokenize assets (e.g., real estate, art, ships, and funds) and access crypto currencies. Clients can choose modular building blocks and create a tailor-made platform that is customized for their end-users over secure APIs and intuitive User Interfaces. iVE.ONE has the mission to provide financial market players worldwide a reliable, secure and ready-to-use White Label Digital Asset Infrastructure without technical knowledge.

Management: Phong Dao (CEO, Co-Founder), Evgeny Matershev (CPO, Co-Founder), Robert Malec (CTO, Co-Founder)

Employees: 19

Co-Investors: EOS VC Fund, High-Tech Gründerfonds, CVVC

Company Description: Nayms is a smart contract platform for the placement, trade, reporting and settlement of insurance risk. Tradeable on the platform are so called Smart Insurance Contracts (SIC). SICs are similar to normal insurance contracts but are more transparent, tradable, they can hold loss triggers for automatic pay-out, track transactional and participant activity in real time. They are also collateralised, avoiding counterparty risk and limiting liability. Most offered SICs are insurance policies for crypto currencies where pay-out occurs when for example a wallet has been hacked.

Management: Dan Roberts (CEO, Co-Founder, serial entrepreneur), Theodore Georgas (CTO, Co-Founder, banking IT-specialist)

Employees: 9

Co-Investors: Coinbase Ventures, Spartan Group, MakerDAO, Maven11, XBTO, G1 Ventures, Cypher Capital, Cadenza Capital and others

BREACH

Company Description: Breach (founded 2018) develops, underwrites, and distributes insurance solutions for the digital asset marketplace. These policies insure crypto currencies from hacking attacks on most crypto exchanges. As USD 2 bn were already stolen from exchanges, insurance is relevant for crypto investors. Breach's dashboard makes it easy for clients to manage insurance contracts and track crypto currencies.

Management: Eyhab Aejaz (CEO, Co-Founder, insurance specialist), Iain Fraser (CTO, Co-Founder)

Employees: 8

Co-Investors: Global Founders Capital, Goodwater Capital, Ted Rogers, Alumni Ventures Group, Thomas Bailey, EOS VC Fund and Block.one

Company Description: Qredo is a platform that provides secure and fast movement of digital assets. Qredo offers a custodian service (wallets), peer to peer and peer to pool trading via its network, "The vault". The vault enables secure decentralized custody, eliminates private key risks and removes centralized points of attack. These features build institutional trust in Qredo's wallet for crypto assets.

Management: Anthony Foy (CEO, 20+ years of experience in VC-backed growth companies, 4 exits, 2 IPOs), Brian Spectro (CTO, specialist in advanced cryptography; 5 patents)

Employees: 61

Co-Investors: Coinbase Ventures, Celsius Network, Deribit, Wintermute, GSR, Spartan Group, 1kx, gumi Cryptos, Maven11 and others

Company Description: ADHARA provides liquidity management and international payments solutions for decentralised financial networks. Clients such as banks, central banks and corporations can choose from a variety of products including treasury management, FX exchanges or interbank payments.

Management: Julio Faura (CEO, Co-Founder, formerly McKinsey and Santander), Edward Budd (Product Lead, Co-Founder, former Chief Digital Officer of Deutsche Bank), Peter Munnings (COO, Co-Founder, has led projects for central banks)

Employees: 43

Co-Investors: ConsenSys, FOM Capital, Yabeo

Company Description: Spacemesh (founded 2018) employs a new consensus protocol, Proof of Space Time (PoST), that aims to solve the problems of the current Proof of Work (PoW) and Proof of Stake (PoS) protocols. A cryptocurrency based on PoST would be highly usable as a means of payment. PoST could also be the basis to create the infrastructure for smart contracts.

Management: Tomer Afek (CEO, Co-Founder) and Aviv Eyal (Explorer/Builder, Co-Founder)

Employees: 27

Co-Investors: Paradigm, Polychain, Coinbase Ventures, Metastable Capital, Greenfield.One, gumi Cryptos, Lemniscap, Arrington XRP among others

Quality

One way of determining the quality of a private equity / venture capital investment company is by looking at its **track record**. However, the blockchain technology is only just emerging and tokenus is still a young company, founded in 2019. First investments date back to 2020, and target companies are mostly still in seed or early stages of development. Considering that the typical holding period for venture capital is 5 to 10 years, it is way too early to expect exits as a measure of success. There have however been successive financing rounds giving indication of whether an investment has developed favorably (up-round) or not (down-round). For Celsius Network, the recent funding round valued the company in excess of USD 3bn, a steep value appreciation for tokenus.

The key to future success is built on the ability to **identify promising targets and to invest into these targets**. Thus it hinges on the performance of the target selection process, also called the **investment funnel**:

Step 1: Screening

The challenge in this step is to get promising leads. tokenus uses the typical screening tools like online research and industry events. More importantly, the **technological focus allows tokenus to build an ever-denser network in the blockchain ecosystem**, with companies looking for funding, incubators, accelerators and with potential co-investors. Looking only at those investments listed by data provider Crunchbase, tokenus has participated in funding rounds with **more than 50 co-investors**, an extremely valuable source of leads.

In 2020, 78 companies passed a first screening at tokenus and moved into the next stage.

Investment Funnel 2020

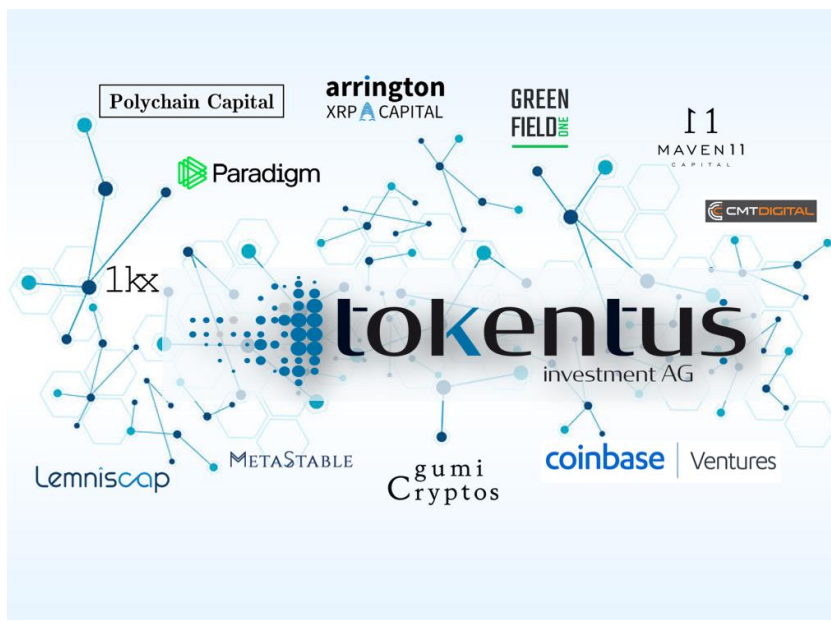

Source: Company data, AlsterResearch

Step 2: Deep Dive

Once a company has made it through the screening process, it is deemed worth putting in the resources for due diligence. This involves a **full assessment of the target company**, including the business model, the team, the market and the strategic fit into the portfolio, including potential synergies. Due to the infancy of most blockchain companies, due diligence is less about analyzing financial statements and more about evaluating the competence of the team and the potential of the idea.

Since tokenus is now established as an investor in the blockchain community, it can **benefit from the expertise of respected co-investors, who often take the lead in a funding round.**

Network of Co-Investors

Source: Company data, AlsterResearch

Some of these co-investors are among the largest and most highly regarded VCs in the blockchain universe. To highlight just a few, consider only those from San Francisco, the venture capital hub of the Western world:

- **Coinbase Ventures** is the VC division of Coinbase, the company operating the largest crypto exchange in the world. Coinbase Ventures has completed 131 investments.
- **Gumi Cryptos Capital** is a blockchain and crypto asset venture fund and has raised USD 30m across three funds. Gumi has made 35 investments in blockchain companies.
- Another San Francisco-based VC is **Polychain Capital**. Polychain has invested in 112 blockchain companies.
- And finally, **MetaStable Capital** has completed 21 investments. Andreessen Horowitz and Sequoia Capital, two of the 10 largest VC firms worldwide, are investors in MetaStable.

Of the 78 companies entering the Deep Dive phase, 11 passed through this stage into the Committee Pitch.

Step 3: Committee Pitch

Each investment candidate that has passed the Deep Dive stage is pitched to the Investment Committee. The Committee consists of three members of the supervisory board (4 members) and the advisory board (4 members). This step consists of **a final check on the economic and legal terms of the transaction**, and an approval has to be unanimous. The Committee Pitch is an important part in keeping up with a strict compliance framework in the investment process.

Of the 11 companies pitched to the Committee in 2020, 7 passed this stage.

Step 4: Investment

Once a company has successfully passed through all stages of the funnel, an investment by Tokentus can be made. In 2020, this was the case for 8 investments in 7 companies.

The type of investment varies and could be in the form of equity, convertible notes or SAFE:

Equity: For startups, investors' vehicle of choice often is *preferred equity*, which typically has a higher claim on the assets of a company than common equity, for example in bankruptcy proceedings, and additional rights. Founders and employees often hold *common stock* with fewer rights.

Convertible notes: One of the most contentious issues in an equity funding round is the valuation. A convertible note can delay this problem by structuring it as a loan that only at a later stage can be converted into equity at the valuation of a later funding round.

SAFE (simple agreement for future equity): In a SAFE, an investor provides funding to a company in return for the right to invest into equity in the future when certain events occur. Usually the trigger is a future sale of shares of the company. Like a convertible note, the SAFE also postpones the difficult task of valuation to a later time. Unlike a convertible note, there is no interest and no maturity and the SAFE thus does not qualify as debt. This lowers the complexity and transaction costs compared to convertibles.

Tokentus mostly invests via equity but has also participated in funding rounds with convertible loans (IVE.One) and SAFE (Breach).

SWOT analysis

Strengths

- Highly focused investment manager
- Growing network of co-investors provides access to deals and expertise
- Early mover in blockchain investments
- Strong start in building a track record (first unicorn!)

Weaknesses

- Corporate structure is built for strong growth in assets managed, thus cost base currently too high in relation to assets
- Volatile token values could translate into volatile NAV and share price
- No exits yet
- More than 90% of portfolio value in 2 assets (Celsius equity and Qredo token)

Opportunities

- Immense growth of blockchain applications and investments
- Blockchain winter could provide good entry points

Threats

- Stricter regulatory oversight for crypto lending products could diminish value of Celsius
- Blockchain winter devaluing the portfolio

Growth

In December 2017, a little-known microcap stock called Long Island Iced Tea Corp announced that it would pivot and change its name to "Long Blockchain Corp". The stock soared more than 200% as a result:

BITCOIN

\$24 million iced tea company says it's pivoting to the blockchain, and its stock jumps 200%

Source: CNBC

Most observers would agree that this was a pretty obvious sign of overly inflated expectations and might have been the peak of what Gartner calls the "Hype Cycle". A good three years later, the picture has changed radically.

Gartner recently updated their view on the state of play for different blockchain-related technologies, showing that some segments of the market are still hyped up, for example NFTs and DeFi.

For others, however, expectations are normalizing (tokenization, smart contracts) or are converging towards a realistic assessment of the true growth potential (consensus mechanisms, blockchain wallets, cryptocurrencies). Finally, many applications and technologies are still at a very early stage ("innovation trigger"), thus promising sources of future growth.

The Blockchain Hype Cycle

Source: Gartner (July 2021)

Among the **growth drivers** according to Gartner are

- widespread **adoption of Bitcoin**, even as legal tender in El Salvador
- the adoption of **distributed ledger technologies (DLTs) for money movement** and the deployment of **central bank digital currencies (CBDCs)**
- **DeFi** applications offering great financial rewards (e.g. high interest rates)
- the **tokenization** of assets, especially NFTs and DeFi tokens, and tokens linked to physical assets in the future
- **cost-effective alternatives to Ethereum** transactions, for example on Binance, Cardano or Solana
- migration from proof-of-work to **more energy-efficient consensus mechanisms**

Among the challenges are global regulatory risks and China's continued clampdown on crypto activities.

So what does this all add up to in terms of market growth? One useful gauge are the **investments into blockchain technology**. In 2018, this figure stood at USD 1.5bn (source: IDC). Since then, **growth rates have been stratospheric**, exceeding 80% in 2019 and 50% in 2020, with a similar performance expected for 2021. Global spending is estimated to reach in excess of **USD 18bn in 2024, a 12-fold increase compared to 2018** and translating into average **growth rates in excess of 40% in the years to come**:

Global Spending on Blockchain Solutions (USD bn)

Source: IDC, April 2021

Looking at the industry split, **nearly 30%** of spending on blockchain technologies in 2021 is expected to come from the **banking sector**, where the blockchain is employed for cross-border payments & settlements and trade finance & settlements. Another **20%** of spending is from the **manufacturing industry**, where the key use case is to gather product information and track product journeys in a way that is secure, trustworthy and accessible ("provenance").

Other industries spending highly on blockchain technologies are professional services, retail, and insurance. These industries use blockchain to trace the movement of payments and products.

Finally, it is worth highlighting that the adoption of blockchain technologies has a **disproportionally large impact on economic growth**. A 2020 study by PwC estimates that the adoption of blockchain technologies will contribute USD 65bn to GDP in 2021, USD 421bn in 2025 and USD 1,746bn in 2030. The development and split between use cases is displayed in the following graph:

Blockchain's Economic Contributions (USD bn)

Source: PwC, Time for Trust, October 2020

Overall, this development translates into a CAGR 20-25E of 60% in the economic impact of blockchain technologies. So there seems to be a broad consensus that there is **substantial growth ahead for blockchain applications, with high double-digit rates visible for many years to come**. This should open the door for many startups and thus potential investment targets for tokenus. Also, it is a fertile ground for value appreciation of the existing portfolio.

According to the Blockchain Venture Capital Report from April 2021, less than 1% of all VC investments currently go into blockchain related companies. The room for growth also from this perspective looks significant.

Valuation

Introduction

The usual valuation techniques employed by AlsterResearch, i.e. DCF and FCF yield, are not applicable to an investment company such as tokentus. Instead, we use the most appropriate approach in this case, i.e. we calculate a **sum-of-the-parts** valuation by adding up the value of the portfolio constituents, subtracting the net debt or adding the net cash and arrive at an estimated net asset value (NAV).

Note that tokentus reports under German GAAP (HGB), which contains the following rules for the reporting of financial assets: **Current financial assets** are reported as the lower of cost or market, with an impairment booked if the fair value is below the carrying amount. **Non-current financial** assets are carried at amortized costs. An impairment loss has to be booked if a decrease in value is non-temporary; if a decrease in value is temporary, impairment is optional.

So in both cases, **the value of the asset on the balance sheet can never exceed the cost including acquisition expenses** ("Anschaffungs- oder Herstellungskosten"). As a consequence, the value of financial assets on the balance sheets is a poor indication of the actual value of those assets if they appreciate in value and should not be the basis for valuing the company.

Sum-of-the-parts valuation (NAV)

The assets of tokentus consist of investments in companies and in tokens.

The investments in companies are via equity stakes or related instruments like convertible loans or simple agreements for future equity / SAFE (explained later). If there is no good reason to proceed otherwise, we **use the latest post-money valuation** as the basis.

Celsius Network

Celsius Network has grown exceptionally since tokentus' investment in July 2020 and recent transactions for similar companies suggest a steep increase in value.

The following table shows peer transactions and valuations based on 2 metrics: the equity value in relation to the assets held on the platform and the value per registered user.

Valuation Celsiusus							
Company	Founded	Business model	Community Assets	Users	Valuation	asset multiple	USD per user
BlockFi	2017	blockchain-based lending platform	USD 15 bn	265 k	post-money Series D 03/2021: USD 3 bn	0,20	11.320
Amber Group	2017	cryptocurrency financial services	USD 1.5 bn	na	pre-money Series B 06/2021: USD 1 bn	0,67	na
Circle Internet	2013	cryptocurrency financial services	na	2.8 m eoY	planned reverse IPO via SPAC: USD 4.5 bn	na	1.607
Coinbase	2012	cryptocurrency financial services	USD 180 bn	68 m	market cap: USD 52 bn	0,29	765
					median	0,29	1.607
Celsius	2017	blockchain-based lending platform	USD 24 bn	> 1 m	implied valuation of Celsius:	USD 7 bn	USD 1.7 bn
					AlsterResearch valuation:	USD 3 bn	

Sources: Crunchbase, AlsterResearch, corporate information

There have been some regulatory issues for blockchain-based lending platforms recently. For example, Coinbase canceled the introduction of a lending product after the SEC issued legal warnings. Also, Kentucky recently joined New Jersey, Texas, and Alabama in trying to prohibit Celsius' interest-bearing accounts.

Despite these issues, Celsius announced on October 12th 2021 a USD 400m funding round led by WestCap, a growth equity firm, and Caisse de dépôt et placement du Québec (CDPQ), a Canadian investment manager for public retirement and insurance plans. The **funding valued Celsius in excess of USD 3bn**, i.e. Unicorn territory, thus providing evidence for the (ballpark) correctness of our valuation assumption of USD 3bn pre-money.

Qredo Tokens

tokenus only invests in tokens of companies where it holds an equity stake. Tokens are regularly distributed to investors. This for example was the case for Qredo. According to information released by Qredo on Aug 26, 2021, the following graphs show the token allocation and release schedule:

RELEASE SCHEDULE

PRIVATE SALE	7.28%
PUBLIC SALE	4.00%
TOTAL TOKEN SALE	11.28%
TEAM	22.00%
ADVISORS	3.70%
ORDINARY	10.00%
SEED	21.30%
INVESTORS	34.30%
QREDO DISTRIBUTION	10.00%
INITIAL VALIDATORS	4.00%
ECOSYSTEM	11.00%
TREASURY / RESERVE	3.784%
TOTAL	100.00%

TOKEN DISTRIBUTION

TOKEN ALLOCATION

SCHEDULE	VESTING	CLIFF
TEAM	24	12
INVESTORS	24	12
QREDO DISTRIBUTION	PERMANENTLY LOCKED	N/A
ECOSYSTEM	48	0
INITIAL VALIDATORS	0	0
PUBLIC SALE OPTION 1 - UNINVESTED	0	2
PUBLIC SALE OPTION 2 - VESTED	12	6
PRIVATE SALE	18	6
RESERVE	60	12

Source: Qredo

So the total number of tokens allocated to investors is 343 million. These tokens will vest over 24 months and have a lockup period (called a “cliff” in blockchain terminology) of 12 months. **In the filing of the prospectus on October 18th, tokenus disclosed the number of Qredo tokens held at c. 12.2m.**

Putting it all together

Now we have all building blocks to calculate the net asset value (NAV) of tokenus. The first part of the table calculates the value of the investments in portfolio companies. For the most part, we could rely on published data, the relevant valuation base is given in the table.

Given the high volatility of the price for Qredo tokens, we use the 30-day average based on coinmarketcap prices. The tokens held by tokenus have a staggered vesting period until 2023, and after vesting there is a lockup of 12 months. Currently the supply of Qredo tokens is quite limited, but it will grow as the release schedule is followed and more tokens come off the cliff, which could lead to downward pricing pressure. To account for this risk, we apply a discount of 20%.

To account for the costs of managing the portfolio, we estimate the cost share of only managing the existing portfolio at EUR 168k in 2021, growing by 3% annually for 8 years (our assumed holding period). We discount these costs at 8% and come to steady state discounted holding costs of c. EUR 1.1m, which we subtract from NAV. With these assumptions, we come to a **fair value per share of EUR 5.23:**

Valuation tokentus

Company Value		Investment		
Company	(EUR m)	Valuation base	Equity stake	value (EUR k)
Trality	2,9	latest post-money valuation	4,07%	118
Adhara	na	valuation prospectus	1,15%	231
Qredo	21,4	latest post-money valuation	1,73%	372
Breach	na	Investment via SAFE	na	124

		Price per token (EUR)	1,47	
		Discount for lockup	20%	
		Adj. price per token (EUR)	1,17	14.315
			token total	14.315
			+ equity total	7.941
			portfolio value	22.256
			- 8 years discounted steady state costs	1.145
			+ current cash	1.800
			NAV	22.911
			number shares (k)	4.381
			NAV per share (EUR)	5,23

Sources: AlsterResearch, Crunchbase, tokentus, coinmarketcap

As discussed above, tokentus has announced a capital increase of up to 20m shares. Since the maximum number of newly issued shares is potentially high in relation to the number of outstanding shares, the fair value could see substantial dilution if a high number of shares is issued. The following table shows the post-transaction NAV for different numbers of shares issued, assuming 5% issuance costs:

	number shares issued @ EUR 2.55 (m)				
	0	2	5	10	20
post transaction fair value (EUR per share)	5,23	4,35	3,73	3,28	2,93

Source: AlsterResearch

Conflicts of interest

Disclosures regarding research publications of SRH AlsterResearch AG pursuant to section 85 of the German Securities Trading Act (WpHG) and distributed in the UK under an EEA branch passport, subject to the FCA requirements on research recommendation disclosures. It is essential that any research recommendation is fairly presented and discloses interests of indicates relevant conflicts of interest. Pursuant to section 85 of the German Securities Trading Act (WpHG) a research report has to point out possible conflicts of interest in connection with the analyzed company. Further to this, under the FCA's rules on research recommendations, any conflicts of interest in connection with the recommendation must be disclosed. A conflict of interest is presumed to exist in particular if SRH AlsterResearch AG

- (1) or its affiliate(s) (either in its own right or as part of a consortium) within the past twelve months, acquired the financial instruments of the analyzed company,
- (2) has entered into an agreement on the production of the research report with the analyzed company,
- (3) or its affiliate(s) has, within the past twelve months, been party to an agreement on the provision of investment banking services with the analyzed company or have received services or a promise of services under the term of such an agreement,
- (4) or its affiliate(s) holds a) 5% or more of the share capital of the analyzed company, or b) the analyzed company holds 5% or more of the share capital of SRH AlsterResearch AG or its affiliate(s),
- (5) or its affiliate(s) holds a net long (a) or a net short (b) position of 0.5% of the outstanding share capital of the analyzed company or derivatives thereof,
- (6) or its affiliate(s) is a market maker or liquidity provider in the financial instruments of the issuer,
- (7) or the analyst has any other significant financial interests relating to the analyzed company such as, for example, exercising mandates in the interest of the analyzed company or a significant conflict of interest with respect to the issuer,
- (8) The research report has been made available to the company prior to its publication. Thereafter, only factual changes have been made to the report.

Conflicts of interest that existed at the time when this research report was published:

Important disclosures

1. General Information/Liabilities This research report has been produced for the information purposes of institutional investors only, and is not in any way a personal recommendation, offer or solicitation to buy or sell the financial instruments mentioned herein. The document is confidential and is made available by SRH AlsterResearch AG, exclusively to selected recipients [in DE, GB, FR, CH, US, UK, Scandinavia, and Benelux or, in individual cases, also in other countries]. A distribution to private investors in the sense of the German Securities Trading Act (WpHG) is excluded. It is not allowed to pass the research report on to persons other than the intended recipient without the permission of SRH AlsterResearch AG. Reproduction of this document, in whole or in part, is not permitted without prior permission SRH AlsterResearch AG. All rights reserved. Under no circumstances shall SRH AlsterResearch AG, any of its employees involved in the preparation, have any liability for possible errors or incompleteness of the information included in this research report – neither in relation to indirect or direct nor consequential damages. Liability for damages arising either directly or as a consequence of the use of information, opinions and estimates is also excluded. Past performance of a financial instrument is not necessarily indicative of future performance.

2. Responsibilities This research report was prepared by the research analyst named on the front page (the "Producer"). The Producer is solely responsible for the views and estimates expressed in this report. The report has been prepared independently. The content of the research report was not influenced by the issuer of the analyzed financial instrument at any time. It may be possible that parts of the research report were handed out to the issuer for information purposes prior to the publication without any major amendments being made thereafter.

3. Organizational Requirements SRH AlsterResearch AG took internal organizational and regulative precautions to avoid or accordingly disclose possible conflicts of interest in connection with the preparation and distribution of the research report. All members of AlsterResearch AG involved in the preparation of the research report are subject to internal compliance regulations. No part of the Producer's compensation is directly or indirectly related to the preparation of this financial analysis. In case a research analyst or a closely related person is confronted with a conflict of interest, the research analyst is restricted from covering this company.

4. Information Concerning the Methods of Valuation/Update The determination of the fair value per share, i.e. the price target, and the resultant rating is done on the basis of the adjusted free cash flow (adj. FCF) method and on the basis of the discounted cash flow – DCF model. Furthermore, a peer group comparison is made. The adj. FCF method is based on the assumption that investors purchase assets only at a price (enterprise value) at which the operating cash flow return after taxes on this investment exceeds their opportunity costs in the form of a hurdle rate. The operating cash flow is calculated as EBITDA less maintenance capex and taxes. Within the framework of the DCF approach, the future free cash flows are calculated initially on the basis of a fictitious capital structure of 100% equity, i.e. interest and repayments on debt capital are not factored in initially. The adjustment towards the actual capital structure is done by discounting the calculated free cash flows with the weighted average cost of capital (WACC), which takes into account both the cost of equity capital and the cost of debt. After discounting, the calculated total enterprise value is reduced by the interest-bearing debt capital in order to arrive at the equity value. Detailed information on the valuation principles and methods used and the underlying assumptions can be found at <https://www.alsterresearch.com>.

SRH AlsterResearch AG uses the following three-step rating system for the analyzed companies:

- **Buy:** Sustainable upside potential of more than 10% within 12 months
- **Sell:** Sustainable downside potential of more than 10% within 12 months.
- **Hold:** Upside/downside potential is limited. No immediate catalyst visible.

NB: The ratings of SRH AlsterResearch AG are not based on a performance that is expected to be "relative" to the market.

The decision on the choice of the financial instruments analyzed in this document was solely made by SRH AlsterResearch AG. The opinions and estimates in this research report are subject to change without notice. It is within the discretion of SRH AlsterResearch AG whether and when it publishes an update to this research report, but in general updates are created on a regular basis, after 6 months at the latest. A sensitivity analysis is included and published in company's initial studies.

5. Date and time of first publication of this financial analysis
20-Oct-21 09:33:30

6. Risk information

- Stock exchange investments and investments in companies (shares) are always speculative and involve the risk of total loss.
- This is particularly true in respect of investments in companies which are not established and/or small and have no established business or corporate assets.
- Share prices may fluctuate significantly. This is particularly true for shares with low liquidity (market breadth). Even small orders can have a significant impact on the share price.
- In the case of shares in narrow markets, it may also happen that there is no or very little actual trading there and that published prices are not based on actual trading but have only been provided by a stockbroker.
- In such markets a shareholder cannot expect to find a buyer for his shares at all and/or at reasonable prices. In such narrow markets there is a very high possibility of manipulating prices and in such markets there are often considerable price fluctuations.
- An investment in shares with low liquidity and low market capitalization is therefore highly speculative and represents a very high risk.
- There is no regulated market for unlisted shares and securities and a sale is not possible or only possible on an individual basis.

7. Major Sources of Information Part of the information required for this research report was made available by the issuer of the financial instrument. Furthermore, this report is based on publicly available sources (such as, for example, Bloomberg, Reuters, VWD-Trader and the relevant daily press) believed to be reliable. SRH AlsterResearch AG has checked the information for plausibility but not for accuracy or completeness.

8. Competent Supervisory Authority SRH AlsterResearch AG are under supervision of the BaFin – German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), Graurheindorfer Straße 108, 53117 Bonn and Marie-Curie-Straße 24 – 28, 60439 Frankfurt a.M. This document is distributed in the UK under a MiFID EEA branch passport and in compliance with the applicable FCA requirements.

9. Specific Comments for Recipients Outside of Germany This research report is subject to the law of the Federal Republic of Germany. The distribution of this information to other states in particular to the USA, Canada, Australia and Japan may be restricted or prohibited by the laws applicable within this state.

10. Miscellaneous According to Article 4(1) No. i of the delegated regulation 2016/958 supplementing regulation 596/2014 of the European Parliament, further information regarding investment recommendations of the last 12 months are published free of charge under <https://www.alsterresearch.com>.
